

Mastering Code Generation in Dart to Write Repetitive Code Automatically

Aachman Garg

 @imaachman

 in/imaachman

Overview

- What is code generation in Dart?
- Advantages of code generation
- Annotate classes for code generation
- Inspect classes using a visitor
- Write a custom serialisation generator
- Learn to configure the builder
- Use the generator in a Flutter project
- Code challenge

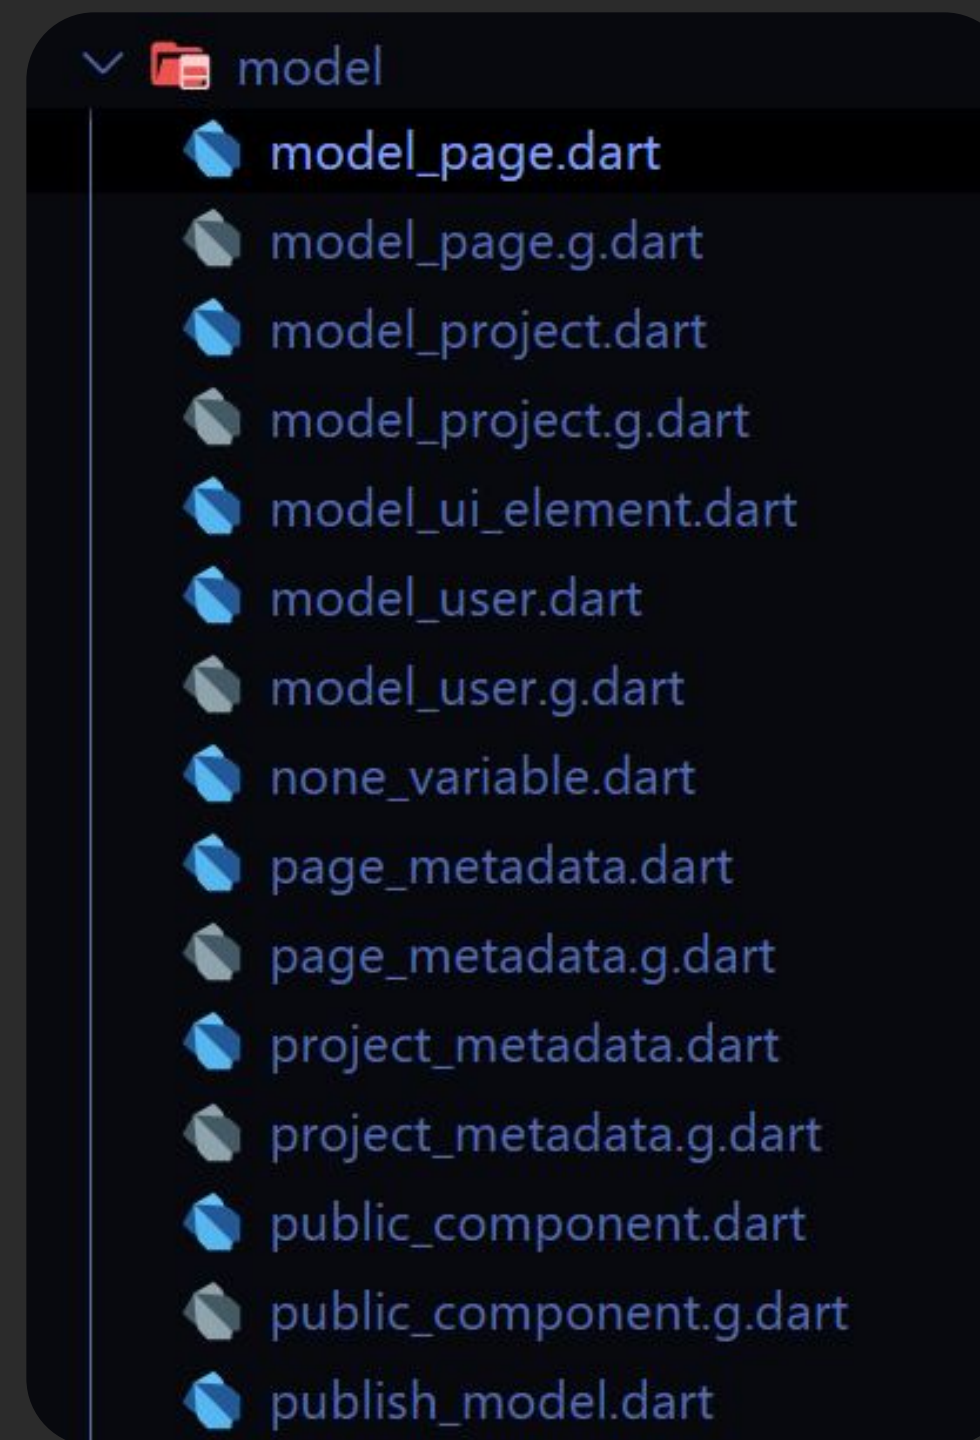

What is code generation in Dart?

Repetitive Code Example

```
Person copyWith({  
  String? name,  
  int? age,  
  bool? codes,  
}) =>  
  Person(  
    name: name ?? this.name,  
    age: age ?? this.age,  
    codes: codes ?? this.codes,  
  );
```

Use Code Generation

Step 1: Annotate the class

```
@clone  
class Person {  
    final String name;  
    final int age;  
    final bool codes;  
}
```

Step 2: Run the *build* command

```
dart run build_runner build
```

Advantages of Code Generation

Advantages of Code Generation

1. Saves time and effort
2. Prevents human errors
3. Clean, consistent and readable code

Project Demonstration

Annotate Class for Code Generation

Write Custom Generators

Dependencies

- **build**: Exposes classes, such as ***BuILder***, that enable templating the code and generate new files from existing ones.
- **source_gen**: Wrapper around the ***build*** package that provides high level API to write custom code generators.
- **analyzer**: Enables class inspection, i.e., extracting metadata from the classes. No need for explicit import as the ***build*** package uses ***analyzer*** under the hood and exposes it.
- **build_runner**: Enables the ***build*** command. It traverses through the entire codebase in search of annotations and generates the code accordingly.

Class Inspection

Configure the Builder

Example Usage

Code Challenge

Code Challenge **Solution**

Summary

- The concept of code generation
- Advantages of code generation
- Annotate classes for code generation
- Class inspection
- How to write custom generators
- Builder configuration
- Usage in a Flutter project

Thank You!
